SENTINEL Pull Printing

Premium Secure, Seamless, Printer Access-Control Solution

Sentinel Affixed to a Corporate Printer

Main Features

- **MailToPrint**
  Print from any mobile device

- **Follow-Me Printing**
  Retrieve a print-job from any printer

- **Single-Sign-on**
  Use existing RFID enabled corporate tags to access the system

- **ScanToMe**
  Scan and send the file automatically to your email without selecting your email

- **Sophisticated Report Generation**
  Access built-in reports such as filtering reports by printer, user, quantity, etc.

- **Web Access for Users**
  Enable User control of print jobs: delete, release, hold and send to other printers

- **Web Management for Administrators**

- **Plug-and-play installation**

Simplify Your Work with Pull Printing

Choose the printer after you click Print. With Sentinel, the printer-server receives the Print command but does not release it until you actually call for it from a printer.

Eliminate the intermediate steps to printing email attachments. Using MailToPrint, you can forward an email with multiple attachments to Sentinel and they will all be printed automatically.

Secure Access to Your Corporation's Printers

Ensure that your organization's sensitive documents are not picked up by an unauthorized person.

Whether copying, printing, or scanning, your Users must first authorize themselves using either their Single Sign-on corporate tag, their Sentinel card, or a PIN code.
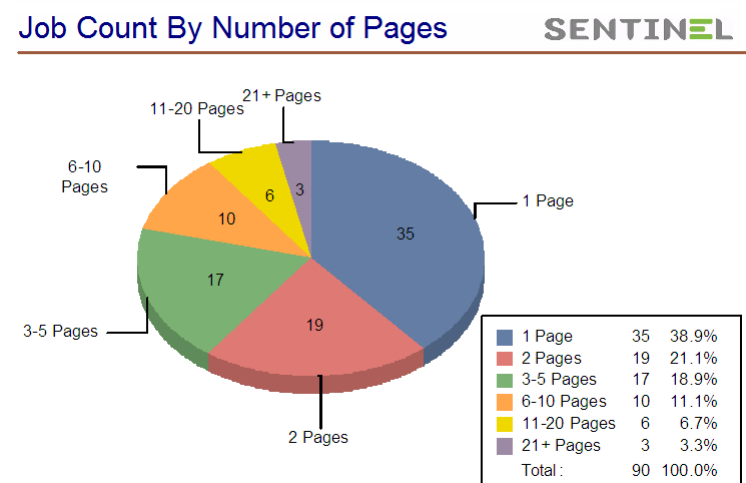

Reduce Costs by Managing Resources

Save your company money by managing printer resources. Uncollected printouts are deleted automatically from the system. As well, printer monitoring encourages responsible printing.

Contribute to Corporate Greening

Think global and act local by reducing the quantity of wasted paper your organization creates.

Track and Monitor Printer Use

Prepare reports that enable you to monitor printer usage.

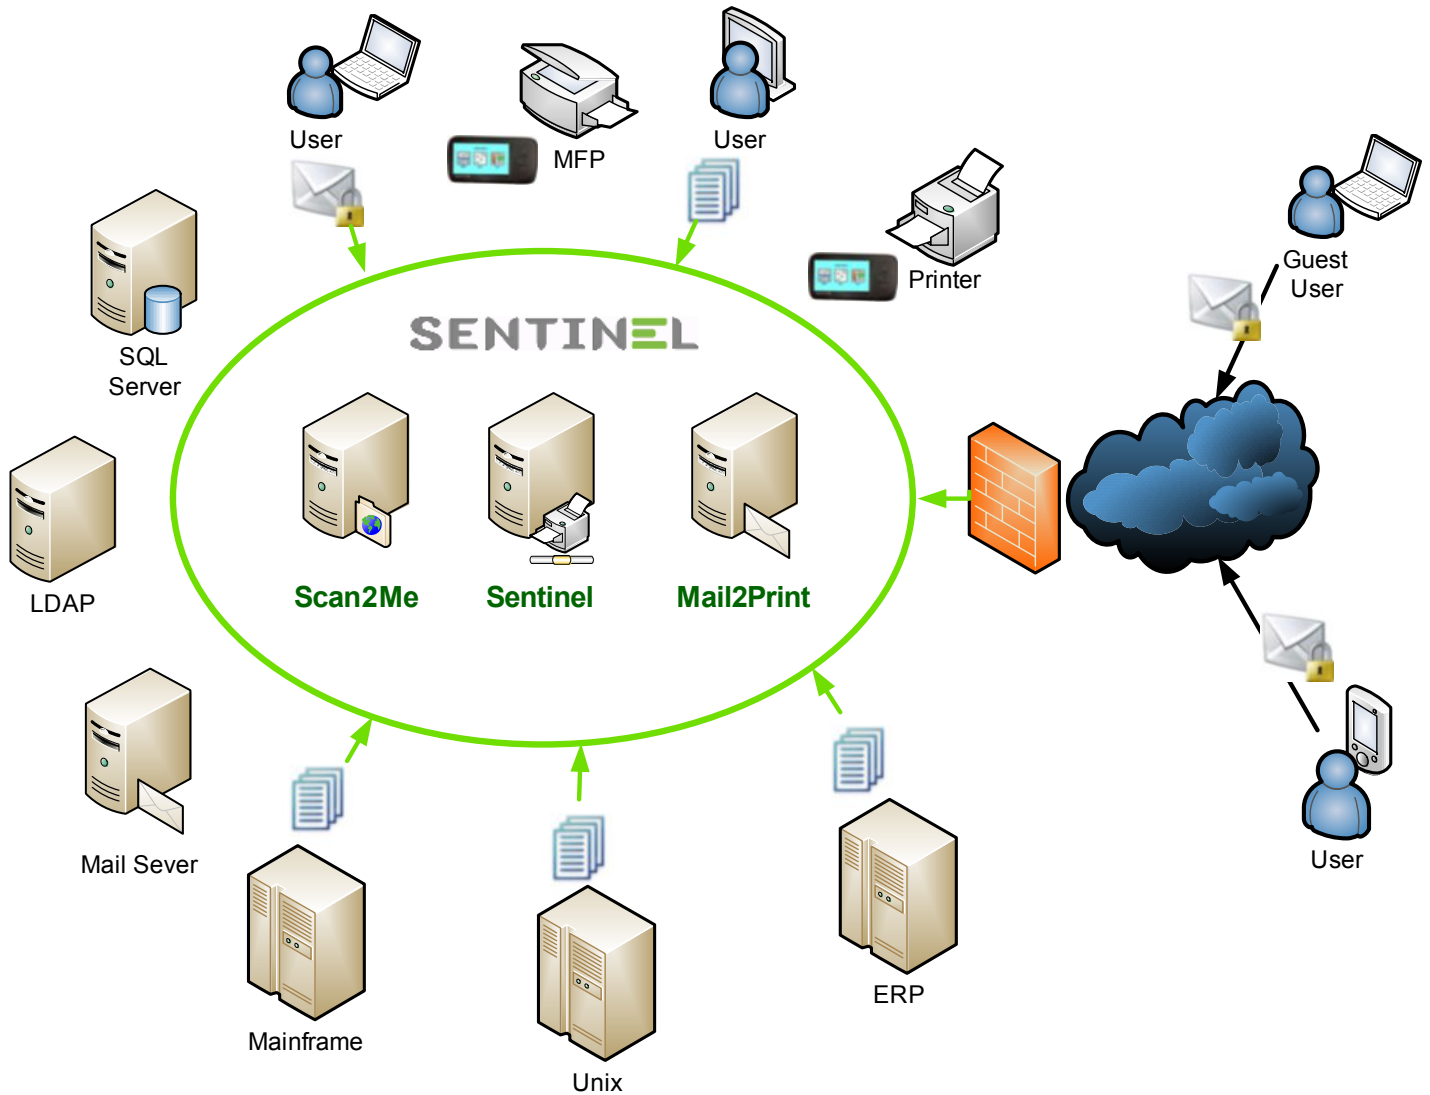

Sample Report: Job Count by Number of Pages
